

Sales One Project – Phase Three – Sales Rep Screen Formatting

salesrepresentative.html

This is what the initial screen looks like:

127.0.0.1:5500/html/salesrepresentative.html

MTC Moodle GitLab Richland County, S...

JavaScript File: script.js

In the js folder, create a file called “script.js” if it doesn’t yet exist and add the file to salesrepresentative.html.

Inside script.js, create a function called getSalesRepInfo. When the button is clicked (add handler or listener logic into the JS file, not into HTML) the function should return an error if the sales person is not found, or the sales representative ID does not match “S001” – see image for error message verbiage and location. Use the messaging function from the previous project. Update the HTML accordingly.

The error message should look similar to the screen below:

The screenshot shows a web browser window with the address bar displaying "127.0.0.1:5500/html/salesrepresentative.html". The browser's address bar also shows "MTC Moodle", "GitLab", and "Richland County, S...". The page has a dark blue header with the "CRM" logo on the left and a "SignOut" button on the right. Below the header, the page title is "Sales Representative Information System". The main content area is a light blue box containing a grey instruction box that says "Enter a sales representative ID to list the sales representative information". Below this is a form with the label "Sales Representative ID:" followed by a text input field and a green "Go" button. Below the form is a red error message box that says "There's no current sales representative with that ID." At the bottom of the main content area is a green "Main Menu" button. At the bottom of the page, there is a footer with links for "Privacy Policy", "Terms of Use", and "Legal Disclaimer", and a copyright notice: "2023 © CRMSystems.com, Inc. All rights reserved".

If the Rep ID is correct (code it to S001 for now), format the screen with the following information. Just use placeholder text for now. We will replace the text with a call to a JSON file.

Place a div with an appropriate ID attribute value to attach a JavaScript-generated simple table. We’ll do it in the JS so that we can easily add columns or rows if ever needed without have to update the HTML. We may also use other elements in the future, and this gives us that flexibility. Place all formatting in

When S001 is entered the screen should look like this:

127.0.0.1:5500/html/salesrepresentative.html

MTC Moodle GitLab Richland County, S...

Add some css so that the th elements are the dark blue of the legend text, and the rows have a bottom border as seen. The screen above has a bottom border color of #ddd.
