

Customers Initial Updates

Update the message at the top of the screen to use the messaging functionality. Use the same architecture as with salesrepresentative.html – update the HTML to have an empty paragraph/element for the message at the top, and a blank div and error paragraph/div below the input for error messages or for displaying the customers associated with one sales representative.

The screenshot shows a web browser at the address 127.0.0.1:5500/html/customers.html. The page has a header with a logo on the left and a 'SignOut' button on the right, along with the user name 'Jennifer Baxley' and the date 'Fri Jul 14 2023 7:40:09 AM'. The main content area is titled 'Sales Representative Information System' and contains a message: 'Enter a sales representative ID to list their associated customers. Select a customer to see more details.' Below this is a form with the label 'Sales Representative ID:' followed by a text input field containing 'xxxx' and a 'Go' button. A red error message is displayed below the form: 'There are no customers associated with that sales representative ID.' At the bottom of the form area is a 'Main Menu' button. The footer contains links for 'Privacy Policy', 'Terms of Use', and 'Legal Disclaimer', and a copyright notice: '2023 © CRMSystems.com, Inc. All rights reserved'.

JavaScript File: script.js

Create a function called `getCustomers` in `script.js`. If the sales representative is not S001 (for now) show the above error message using the messaging functionality.

If it is S001, write out S001 for now.
